

Do Continuous Delivery Right... with XL Release

Track, plan and execute your entire software delivery pipeline

- ✓ Looking for a way to ship software faster while managing risk and maintaining quality?
- ✓ Is your software release process plagued by unnecessary delays, failures and manual coordination effort?
- ✓ Tired of 9 a.m. catch-up calls and emergency production troubleshooting?

- Execute, orchestrate and collaborate on releases in the most efficient way possible.
- Get detailed insight into release processes: where you are, who did what, why, when, and more.
- Visualize your release flow in a central up-to-date dashboard for Dev, Ops and business users. Easily identify and resolve bottlenecks.
- Manage a mix of manual and automated tasks.
- Implement at your own pace – move progressively from manual to fully-automated pipe lines.
- Easily plug in your existing tool set.

Implementing Continuous Delivery (CD) is the next phase of Agile for software development teams: you need to manage your software pipeline from end to end in order to continuously release good code. CD means writing code in small batches, integrating continuously, testing constantly, and automating as much of the process as you can... then feeding back the results to constantly improve.

As projects become more complex, you need a scalable way to manage your pipelines... and that's where Continuous Delivery Management with XL Release comes in.

Continuous Delivery Management with XL Release

- ➔ **Deliver better software, faster and at scale, by managing, monitoring and continuously improving your software release process**
- ➔ **Proactively avoid delays and release failures by tracking resource conflicts, dependencies and pending tasks.**
- ➔ **Accelerate your delivery process and reduce risk by replacing manual activities with automated tasks and by standardizing release plans.**
- ➔ **Transform your current release process into an automated delivery pipeline.**
- ➔ **Start doing Continuous Delivery right... in incremental steps, on your own schedule.**

XL Release is the most advanced and intuitive Continuous Delivery Management software anywhere.

It manages and automates the software delivery pipeline for an application, including all related components and services. XL Release is specifically designed to help teams get better results from their Agile, Continuous Delivery, DevOps and Test-driven development initiatives.

XL Release Features	
Data-driven release dashboard	Use detailed data about your process to make your release decisions and continuously optimize. XL Release's dashboard acts as a single source of release status "truth" for everyone involved in making the release a success.
Intuitive tool for all team members	Introduces one way of working for both technical and less technical DevOps team members. It's easy for people of all skill levels to get started fast, realize benefits immediately and then automate and improve at their own pace.
Integrates easily	Works with the existing tools in your environment like Jenkins, Puppet, Git, JIRA and ServiceNow.
Supports automation, simplifies manual execution	Orchestrates both manual and automated tasks. You can leverage your existing IT investment while exercising complete control over your entire software release process.
Creates automatic audit trail	Provides a full audit trail and gathers evidence for compliance, so you can mitigate risk for your software delivery process. Capture clear metrics to measure your process and improve!
