

Micro Focus ALM Advanced Reporting

An Orasi Training Course

Course Overview

Micro Focus Application Lifecycle Management (ALM) works as a centralized smart repository to handle the entire testing lifecycle, including requirements management, test authoring, test execution, defect tracking, and data reporting and analysis. The data reporting and analysis tools within Micro Focus ALM allow users to see metrics and key process indicators (KPIs) that provide insight into the overall quality of a release. Understanding what types of metrics and reports are useful for production readiness is key to building a comprehensive Micro Focus ALM dashboard and reporting suite.

Orasi™ Software, Inc. delivers a comprehensive Micro Focus ALM Advanced Reporting instructor-led class to help organizations understand the Micro Focus ALM analysis module and create insightful and meaningful reports. Micro Focus ALM Advanced Reporting is a training opportunity for quality assurance (QA) testers and project managers alike and is presented with a balance of lecture and hands-on exercises.

Duration: 1 day

Class Limit: 10 students

Labs: 60% of class time

Prerequisite: Micro Focus ALM End User Basic Training or equivalent

Target Audience

- Quality Assurance and Testers
- Project and Program Managers

Related Classes

- Micro Focus ALM End User Basic Training
- Micro Focus ALM Administration
- Micro Focus Sprinter End User Training

Goals

- QA and testers learn how to develop and manipulate Micro Focus ALM artifact data to accurately report on the overall quality and status of a release
- All students learn what types of metrics are useful and are capable of reporting through Micro Focus ALM
- Project managers learn how to develop meaningful dashboards to gain vision into the quality and status of a release

Agenda

- Creating Project Graphs
- Creating Project Reports
- Creating Excel Reports
- Business Views
- Analysis Dashboards
- KPI Metrics (Micro Focus ALM Premier Only)
- Cross Project Reporting (Micro Focus ALM Premier Only)

Objectives:

This class teaches how to:

- Build quality reports based on Micro Focus ALM testing artifacts
- Work with Micro Focus business views to correlate meaningful data relationships
- Create KPI dashboards to track testing goals and quality
- Create project dashboards for an overall view of project testing
- Report over multiple Micro Focus ALM projects
