

Release Faster. Control Open Source Risk.

Who is Sonatype?

Sonatype exists to unite software developers, security professionals, and IT operations. We empower them to continuously identify and remediate open source risk, without slowing down innovation. We also believe in managing your software supply chain, using the same principles taught by W. Edwards Deming:

- 1** Always source parts from fewer and better suppliers.
- 2** Always use only the highest quality parts.
- 3** Never pass known defects downstream.
- 4** Continuously track the location of every part across your entire software supply chain.

Our Solution

Organizations rely on the Nexus Platform to release faster, while controlling open source risk across their entire software supply chain.

A Better Way to Build.

We have a rich history...

From our humble beginning as contributors to Apache Maven, to supporting the world's largest public repository, to distributing the world's most popular repository manager – Sonatype has a long history of accelerating software innovation.

We know what others don't...

We've seen billions of components come and go; and we've taken notes along the way. We've built a database that blends public and proprietary data with expert research and analysis. We know more about components than anyone in the world.

We make you more intelligent...

A staggering volume of components flow through modern development environments. If properly sourced and managed, these parts provide tremendous energy for accelerating innovation. If not, they lead to vulnerabilities, risks, rework, and waste.

We automate the software supply chain...

Sonatype exists to automate the flow of quality components across software supply chains. Today, over 150,000 installations of Nexus products accelerate software quality, security, and delivery for software organizations around the world.

10 M

Developers rely on Sonatype to manufacture modern apps

3 M

Developers actively use Nexus Repository Manager

25 M

Open source components catalogued and analyzed by Nexus Intelligence service

87 B

Components requested annually from Central Repository
